Stock firmware Android 7
for GI iTV912 2/8 GB DDR3 S912 with date 20180116:

GI_iTV912-NHG47L-20180116.204232.V0928.img

This origin firmware is for Galaxy Innovations from VS (VideoStrong manufacturer), for TV box GI iTV912 2/8 GB DDR3.

This firmware has active buttons for color space (RGB 8bit / YCbCr422 8bit / YCbCr444 8bit) and Dolby Vision (HDR).
RGB 8bit is for old TV manufactured to 2012-2014 (for example SONY, Philips) if is pink/purple/green screen.

It is **img** file to PC flash with **Amlogic USB burning tool 2.0.8**. For PC installation, use **the first USB-OTG port on the Mecool BB2 TV box** (the second USB port is not OTG, so the program Amlogic USB burning tool does not connect the computer to the TV box).

About firmware
It is Android 7.1.1 (full Android - this is not ATV)
Firmware is rooted
RGB8 set tested on television SONY BRAVIA KDL-40S5600 (date of made 2009, LCD RGB 8 bit panel) - **no pink/green screen = OK**
