Scishion V88 mini I. 1/8 GB, RK3229, wifi 6051p - Android 6.0.1

My motherboard of TV box Scishion V88 mini I. 1/8 GB, RK3229, wifi 6051p is MX4MN-V13

Google translator:
I spent the last year searching for a suitable firmware for this TV box.
I tried about 20 of them. Half of them sent me a TV box into the brick (I had to open the TV Box and use a screwdriver to reset the NAND chip). From the other half are only 2 firmware with Android 6 are suitable for this TV box.

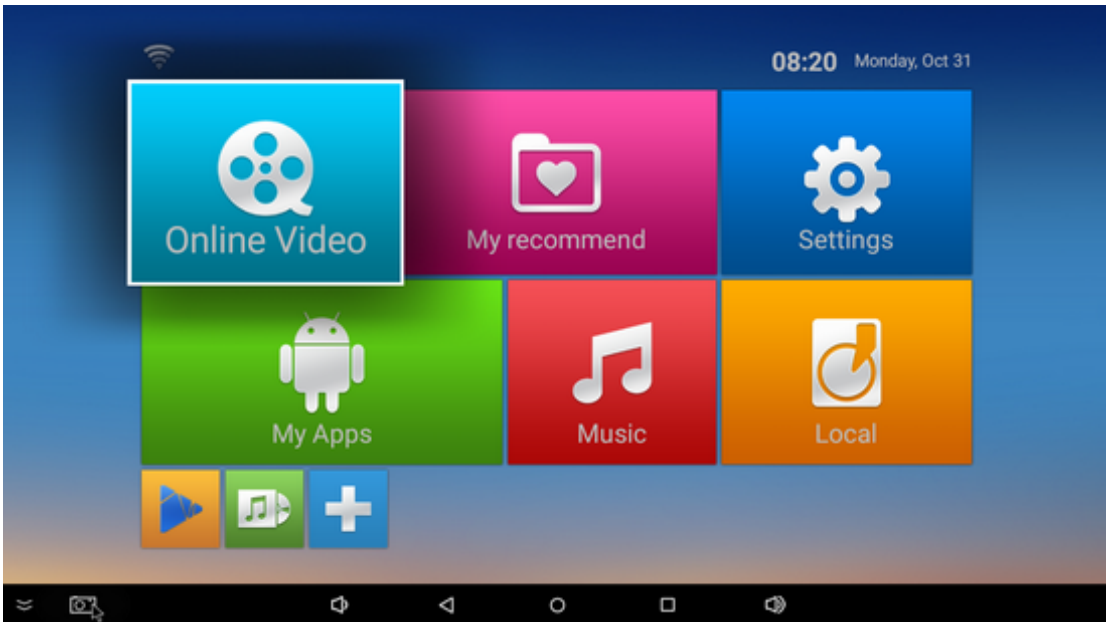
All firmware uploads as "Restore" - not "Upgrade".
USB (OTG) to upload firmware using a computer is **the third in order** (see picture).

Here they are:

Android 6.0.1
rk322X_6.0_box_MX1_V88-MARS-II_SSV6051p_SpecTek_flash-update_20171229.img
Boot version: **2.32**
It is the official (yet only) firmware published on China Gadgets Reviews Firmwares.

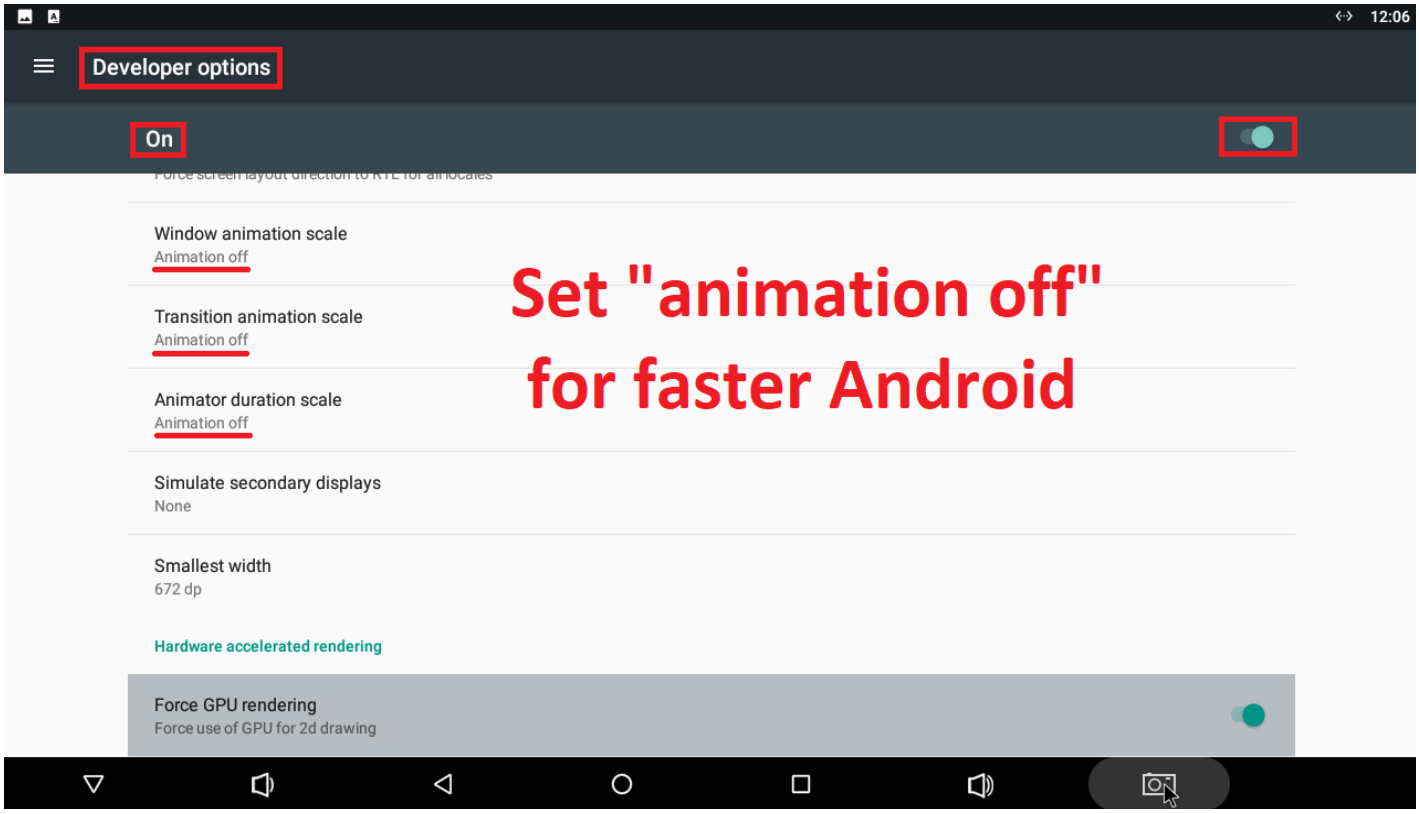
Android 6.0.1
rk322X_6.0_box_MX4N_SSV6051p_SpecTek_flash-update_20171011.img
Boot version: **2.32**
This firmware is about 15-20 percent faster than rk322X_6.0_box_MX1_V88-MARS-II_SSV6051p_SpecTek_flash-update_20171229.img

Android 6.0.1 Launcher (both versions):



USB (OTG) Scishion V88 Mini 1/8GB is third in order:

Info:



Good luck,
